

Technovations™

In the 21st Century School, the innovative use of technology extends beyond the realm of traditional educational technology. Low-cost computing, open source software, second-generation (Web 2.0) interactive tools and advanced management systems create a new world of opportunities for principals, teachers and students.

Technovations is a Teaching Matters consulting service dedicated to helping schools plan for and integrate technology-enabled resources that

match their goals and their budgets, innovating for student success in profound new ways.

- **Customizing low-cost computing solutions.**
- **Designing 21st century learning environments.**
- **Enhancing collaboration, communication, assessment, learning management and digital**

Innovative Thinking for the Classroom and Beyond

Our Technovations team applies their expertise in systems analysis and technology planning to the development of customized 21st century learning environments, focusing on three key areas of support.

Addressing **Technology & Hardware Planning**, we can assess your current environment, identify opportunities and help implement new systems, providing training and support as needed.

The planning process is guided by your long-term priorities and goals for learning, always sensitive to the need for sustainable, affordable solutions.

We also help schools build a greater capacity for **Collaboration & Communication**, assisting in planning

for and implementing resources that benefit students and teachers alike. Ranging from school-wide student and parent email to interactive web design for community outreach, new online systems engage students, strengthen their organizational skills and encourage them to write more. At the same time, teachers gain powerful tools for assessment, management and communication.

Another exciting opportunity lies in the connection between **1:1 Computing & Digital Content**. With the low cost of laptop computers and careful budgeting, it is now feasible for schools to provide each student with a laptop, leading the way to enhanced use of interactive content and the accelerated development of 21st century skills.
